ABOUT ME

Senior Software Engineer focused on backend systems, cloud services, automation, and engineering platforms. Experienced owning business-critical production systems, leading platform migrations, building APIs and data workflows, and solving difficult operational problems across Azure and AWS environments. Strong C#/.NET background with hands-on experience in Python, React, Docker, Kubernetes, CI/CD, and cross-functional product delivery.

EXPERIENCE

Senior Software Engineer

2021-03 – 2026-10

Teleion

Client: Microsoft Research | 2023 – Present.
Own and maintain production data pipelines and backend processes integrating multiple upstream systems, with data integrity, reliability, and operational continuity as primary concerns. Led the migration from Azure Data Factory to Azure Synapse and defined the target state and technical direction for the subsequent transition to Microsoft Fabric. Adapt backend processes as upstream systems change, adding validation and filtering to prevent poor-quality source data from entering downstream systems. Serve as a primary technical voice in recurring client discussions, translating technical issues into business impact and setting expectations around plans, dependencies, risk, priorities, and delivery. Mentor another software engineer on Azure services, troubleshooting, technical judgment, and client communication while managing security requirements and ongoing production maintenance.

Client: The Climate Drive (WBCSD) | 2023 – Jan 2025.
Served as the sole software developer maintaining and evolving a public-facing climate platform, working across product, frontend, backend, authentication, data persistence, and deployment. Delivered product and design changes in React, maintained Contentful integrations, built backend functionality with Supabase, implemented Firebase authentication, and managed Vercel deployments.

Client: Amazon | 2022 – 2023.
Developed Python AWS Lambda functions and supporting data workflows to ingest Adobe analytics into Amazon Redshift for engagement and reporting use cases. Owned AWS networking and access-control configuration for project infrastructure, including secure Redshift connectivity, S3 resources, and permissions for internal and external engineering teams.

Client: Microsoft | 2021 – 2022.
Designed backend migration processes to modernize legacy SharePoint data, integrated Azure Form Recognizer into production workflows, and investigated live-site issues through root-cause analysis.

Software Developer

2019-02 – 2021-03

Premera Blue Cross

Contract via Rooster Park, then converted to full-time employee. Designed and developed REST APIs, backend services, and full-stack enterprise applications, collaborating with internal and external teams from design through production support. Led research and development for adoption of Docker and Azure Kubernetes Service (AKS), evaluating deployment approaches for containerized services. Built and maintained CI/CD automation and supported modernization efforts across the engineering organization.

Software Developer

2016-08 – 2019-02

Insight Global @ Minecraft

Owned and built much of a cross-platform automated validation pipeline supporting Xbox, Nintendo Switch, Windows, macOS, Linux servers, Android, and iOS. Built workflows that queued pull requests, produced builds, deployed to platform-specific devices, executed tests, collected rich results, and returned validation status directly to pull requests. Integrated Azure App Center for mobile automation, modified Java and Swift/Objective-C as needed, and implemented GitHub Actions workflows for safe test retries and stronger merge validation.

Senior Software Consultant

2015-07 – 2016-08

Design Laboratory Inc. @343 Industries

Managed CI/CD pipeline tool I developed for automating testing, deployments, and stress scenarios.

SDET

2011-08 – 2015-07

Insight Global @343 Industries

Ran test suites and packaged reports via email.
Automated test suite runs and emails.
Created CI/CD pipeline tool to deploy, test, and release builds based on human and automated gates.

Software Engineer

2009-07 – 2010-12

Prometric

Updated VB.Net app with C# components to support double byte characters.
Created new components for additional certification scenarios.
Worked on critical bug fixes to support redeployments.

EDUCATION

Bachelor's in Computer Science

2005-10 – 2007-12

Neumont University

SKILLS

C# · .NET · Python · REST · SQL · React · Azure · AWS · Docker · Kubernetes · AKS · Git · CI/CD · Azure Data Factory · Azure Synapse
